

MPS - EUR Cautious Strategy

July 2024

Investment Objective

The objective of the Titan Wealth International model portfolios is to provide broadly diversified efficient portfolios that maximise returns over the long term for different levels risk benchmarked against asset risk consultants peer group. The strategy uses a Core-Satellite model utilising a combination of passive & active investment strategies, with a best in class allocation. This approach is for clients with a medium-long term investment horizon where there is need for a portfolio diversified across multiple asset classes and geographies.

| AMAZON (Equity) | 1.90% |
| APPLE (Bond) | 1.90% |
| DIAGEO (Bond) | 1.90% |

Investment Outlook

As we move into the final third of the year, investor focus appears to be shifting from the timing of interest rate cuts to the potential for a slowdown in economic growth. With the majority of developed market Central Banks almost certainly committed to lowering interest rates in the final part of 2024, investors are now wondering whether the action has come soon enough.

Whilst recent employment data from the US suggests that there is a slowdown, we believe this a concern primarily for those areas of the market that are perhaps overly extended from a valuation perspective or are heavily reliant on a buoyant economic backdrop, the recent performance of US small cap stocks being a good example of this.

The US economy remains resilient, with a strong job market bolstering consumer spending. Non-farm payrolls and retail sales both came in strong and manufacturing ISM ticked into positive territory for the first time since October 2022. The Consumer Price Index (CPI) data came ahead of expectations at 3.5% year-over-year (YoY) , while the Fed's preferred inflation gauge, the Personal Consumption Expenditures Core Price Index (PCE) remained at 2.8% YoY in March.
